

In a climate full of constant change and fast paced technology we are always learning, changing and reaching for success. As APT celebrates 20 years of business, we reflect back on successful turnkey projects, expanding with facilities in Minnesota, Idaho and California, restructuring teams within our organization and investing in capital equipment, all to be the best choice for our customers.

For two decades, we have been searching for innovative ways to deliver solutions to our valued customers. And while we have competitors who offer similar services and equipment, nobody in the industry cares as much about their customers as we do here, at Advanced Process Technologies.

We know our combinations of process, design, engineering, field installation and automation integration allows us to offer product traceability and security to meet the standards expected in today's market.

APT has the capabilities to work with customers from conception to completion. We have the talent, size and experience to provide our customers with customized solutions. For milk, cheese, whey and specialized dairy products we offer local innovation based on our knowledge of North American regulatory requirements.

With facilities in several different states, and experienced employees positioned across the country, APT is able to respond quickly to customer needs. We understand the importance of being nimble as every second a system is down is money lost. As we strive for complete customer satisfaction, a 24 hour support method was established within the controls department. Now APT can be available at (320) 559-0242 for 24 hour assistance.

2019 was another year of successfully completed projects, staff additions, and adapting innovative practices for our customers.

Among the innovations are electrical design changes to better adapt to NFPA 70E standards. 2019 was the first year all of our panels were shipped with customers NFPA 70E compliance in mind. By keeping the voltage below 50 V in our IO panels our startup personnel and our customers are not required to de-energize the panel to access it for troubleshooting. This can be done on all but a few of our standard panels.

Another accomplishment for last year is our certification on another software platform. For years we have been aware of the Inductive Ignition product and knew that it would be a matter of time before it was adopted by some of our customers. This year we submitted several quotes that had Ignition Software as a requirement. APT was ready to jump into certification on the newest software platform. APT made the training commitment required to become an Ignition 8.0 Certified Integrator. We are now 1 of the 9 Certified Integrators in Minnesota. We've already completed 2 projects with Ignition and have several more throughout 2020.

As a signature piece in our full line of cheese making equipment, our patented Advanced Cheese Vat (ACV) has proven performance resulting in higher yields and higher profits. We ended 2019 with 13 ACV's in production, resulting in a total of 100 ACV's since we started making vats in 2006. Our line of cheese making equipment is gaining a strong reputation as we are seen as the highest quality solutions compared to long standing international suppliers.

As proud members of 11 Associations from coast to coast, APT attends valuable conferences and meetings from the International Production & Process Expo to the Northeast Dairy Convention, constantly keeping up to date on industry trends.

ProFood Tech - Chicago

AWS Behind the Mask - APT was awarded 1st and 2nd in GTAW welding competition.

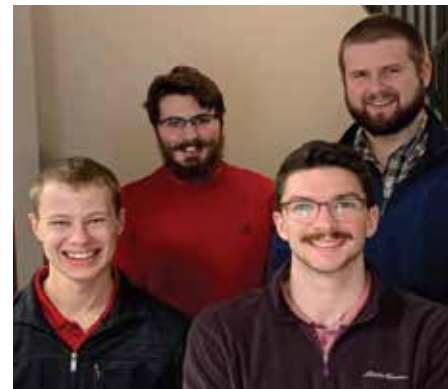

Cheese Industry Conference - Madison

Booth #513
April 15-16
Milwaukee, WI

On Display:
55K vat with Dura-Deck access deck and barrel cyclone with dual augers, including scale and transfer conveyors

As an Employee Owned Company, APT is willing to take the time, resources and effort to make sure each employee is fully trained on multiple fronts to contribute to the overall success of the company. This demonstrates how APT truly cares about our customers, because each person is personally invested in doing the best job they can on each project. New to our team:
